Symbols used

The following table displays the symbols used in this Release Notes.

	Product manufacturer: The name and address of the application's manufacturer.
	Reference Number: Indicates the Reference or Catalog number for this user manual.
	Warnings and Precautions: Highlights information that is critical for optimal performance of the system. May also indicate that loss of data or invalid data could occur if the precautions or instructions are not observed.

Preface

The Floodlight™ MS Pinching Test is a medical device that measure your hand function. This activity will help you, as a person living with multiple sclerosis (MS), collect and review hand function data over time.

Intended Use

The Floodlight™ MS Pinching Test is intended to provide an objective measurement of hand function in patients 18 years of age and older with multiple sclerosis. The Floodlight™ MS Pinching Test is used by patients in their home environment, and the results are reviewable by the patient and exported to a qualified healthcare professional (HCP) for review. The patient is not intended to take action on the device output without consultation of a qualified HCP.

The Floodlight™ MS Pinching Test only provides objective measurements of hand function and does not provide an interpretation or a clinical implication of the measurements. The Floodlight™ MS Pinching Test should only be used as an adjunctive tool for measuring hand function, and is not intended to be used as a stand-alone diagnostic device nor to identify the presence or absence of clinical diagnoses.

Supported Platforms

The following table displays the supported platforms for Floodlight™ MS Pinching Test.

Platforms	Version
Floodlight™ MS SDK: iOS	1.3

Known Limitations and Workarounds

The following issues are identified as known issues with workarounds in the current release of Floodlight™ MS Pinching Test.

Using the Android Back button in the middle of an activity takes you to the wrong screen

If you are using an Android phone and tap the Android Back button in the middle of an activity, occasionally, you may be taken back to the start screen for the activity. In this case, you will have to start the activity again.

Voice assistant does not work when used to start an activity

On an Android phone, sometimes the voice assistant does not work when you try to use to start an activity. In this case, to properly start an activity with the voice assistant open, you will have to exit the activity and restart it again.
